SUMMARY

Motivated Robotics and Automation Engineering student at Visvesvaraya Technological University, Belgaum, with a strong passion for robotics, automation systems, software development, and building dynamic web applications. Skilled at blending engineering principles with modern software technologies to solve real-world challenges. Enthusiastic about creating innovative solutions and eager to contribute to projects in robotics, AI, and full-stack development.

INTERNSHIP

Front-End Software Engineering Intern

Skyscanner

📅 01/2025 - 02/2025

Job simulation experience in front-end software engineering

- Built a web application using React as a front-end engineer at Skyscanner
- Developed a page for picking a travel date using Skyscanner's open-source Backpack React library
- Customized the application and ran automated tests to ensure it rendered properly

Advanced Software Engineering Intern

Walmart

📅 03/2025 - 04/2025

Job simulation experience in advanced software engineering

- Solved difficult technical projects for various teams at Walmart during job simulation
- Developed a novel version of a heap data structure in Java for Walmart's shipping department
- Designed a UML class diagram for a data processor, considering various operating modes and database connections
- Created an entity relationship diagram to design a new database for Walmart's pet department

EDUCATION

B.E. in Robotics And Automation

Visvesvaraya Technological University

📅 08/2022 - 06/2026 📍 Belagavi

Pre-University Course (PCMB)

Govindram Seksaria Science Pre University College (GSS)

📅 08/2020 - 06/2022 📍 Belagavi

SKILLS

Robotics

Java

C/C++

React

Data Structures

Python

CAD

Fusion360

Additive Manufacturing

PROJECTS

Cartesian Coordinate Robot

A project focused on developing a Cartesian coordinate robot with high precision

- Designed and built a 3-axis Cartesian robot for precise pick-and-place, CNC, or assembly applications
- Utilized linear actuators, stepper/servo motors, and PLC/Arduino/Raspberry Pi for control
- Programmed motion control using G-code or custom algorithms for high repeatability (+0.1mm accuracy)
- Integrated end-effectors (grippers, drills, sensors) for task automation

Design and Development of a Hybrid Quadruped Robot with Wheeled Locomotion for Terrain Navigation

This project presents the design and development of a hybrid quadruped robot that uses both legs and wheels for movement. The robot is built to walk on uneven terrain and roll on smooth surfaces, improving overall mobility.

- Developed a hybrid robot capable of both legged and wheeled movement.
- Focused on achieving smooth motion on flat surfaces and stability on rough terrain.
- Designed the mechanical structure, integrated motors and sensors, and created control functions.
- Ensured the robot can adapt its movement style according to terrain conditions.
